Course Description

This course provides update of NDT and current integration of theory and practice. Also, it provides a brief update of the ICF assessment model and treatment planning. An in depth look at postural control and anticipatory postural control will be covered, along with the ability and technique for teaching posture through movement and exercise to promote functional skills. Being able to function in upright and talk, breath and use your hands is an important aspect of functional tasks. Functional tasks will be analyzed and treatment plans developed and explored through LAB and practicum or demonstrations. This course is appropriate for Occupational Therapists, Occupational Therapist Assistants, Physical Therapists, Physical Therapy Assistants, Speech-Language Pathologists, and Speech-Language Pathology Assistants.

Course Objectives

The participants will:

- 1) Understand an update of NDT and its application to assessment and treatment planning.
- 2) Understand and problem solve the NDT model of assessment (ICF) with an emphasis on posture and how it relates to children with CNS impairments.
- 3) Be able to create postural and functional goals and treatment plans for specific tasks for children with CNS impairments.
- 4) Understand and execute handling concepts as they apply to posture and function and be able to integrate them into treatment sessions with discipline specific functional goals.
- 5) Be exposed to therapeutic adjuncts and practice their use and how they integrate into patient care.

Instructor

Kacy Hertz, PT, C/NDT
NDTA Coordinator Instructor

Kacy has been teaching courses throughout the U.S. for over 20 years. She is the co-owner of City Kids, Inc. in Chicago, IL. She is passionate about helping therapists become better clinicians. Her curriculum focuses on practical application of handling techniques to enhance the clinician's management of their clients. Kacy brings a wealth of clinical experience to each continuing education course.
